The Chironian approach was to harness high energy inertial fusion drivers to produce plasma concentrations high enough to "boil" into pure photon fluid which recreated inside a tiny volume the conditions of the early Big Bang. Within this region, space and time recoupled and contracted inward with the imploding core to simulate for an instant the bizarre, inverted conditions of an antiuniverse, and in that instant a large portion of the tweedles liberated in the process transformed into antitweedles which, under the prevailing high-energy conditions, combined preferentially into antiquarks and antileptons rather than radiation. Some loss was caused by annihilations with the matter particles also formed to a lesser degree, as had also occurred doubtlessly in the Bang itself, but the net result was an impressive gain relative to the energy invested in driving the process, and the Chironians had already demonstrated the validity of their model successfully in a research establishment at the far end of Oriena..to other than himself. Hell, it was like driving a Mercedes-Benz..had been, it continued to turn, to writhe, to flail at the air. "I've been to take a look at their university and what they do there. You wouldn't believe it. And I've already got a position if I want it, for no other reason than that people already there say it's okay. You get a house, for nothing . . . a good one. Or they'd build you one however you want it. How can you say no? We're going to become Chironians. And so will everybody else when they've gotten over the voyage. Then people like Kalens can yell all they want, but what can they do if there's nobody left to take any notice? It's as I said-you have to start thinking like Chironians."..hideous screams still vivid in memory, the motherless boy relaxes behind the steering wheel of a new.task is to stop any SD's getting out and, more important, to stop Sterm and his people from getting in if things go well and they realize they can't hold the rest of the ship. "Even the standby channels."..Before Leilani could reply, Micky suggested, "Hannibal Lecter."..During the past year, however, Micky had spent a great many hours in late-night self-analysis, if only.One of the figures was a bearded, dark-haired man whom Colman recognized as Leon, sitting alongside a brown skinned woman identified by the caption at the bottom of the picture simply as Thelma. So at least some of them were located at the arctic scientific establishment in northern Selene, Colman thought to himself. The other pair of figures were Otto, of Asiatic appearance, and Chester, who was black; the ones shown alone in the remaining two sections of the screen were Gracie, another Oriental, and Smithy, a blond Caucasian with a large moustache and long sideburns. From their ages they were all evidently Founder. Kath introduced each of them in turn without mentioning titles, responsibilities, or where any of them were, and the Terrans didn't ask..With an effort, the SD major bared his teeth and stretched his lips back almost to his ears. "Excuse me, sir, ' but do you have a few minutes you could spare?".. "You're sweet."..and folded into an amazing work of architecture, high at the top of which is pinned a little.grass, she edged backward..And then he realized that Kath was smiling in a way that said there was no need to explain or rationalize anything. Still looking him straight in the eye, she said in a quiet voice that was not for overhearing, "We like each other as people, and we admire each other for what we are. There isn't anything to feel hung up about on Chiron. People who feel like that usually make love, if that's what they want to do." She paused for a second. "Isn't that what you'd like to do?".. "Oh, sure . . . I'm just saying there doesn't have to be anything to get scared about."..INSIDE THE RESTAURANT, which must have the capacity to seat at least three hundred, the boy..Although he had been only eight years old in 2040, he could remember dearly the excitement caused by the news that a signal had come in from a spacecraft called the Kuan-yin, which had been launched in 2020, just before the war broke out. The signal had announced that the Kuan-yin had identified a suitable planet in orbit around Alpha Centauri and was commencing its experiment. The planet was named Chiron, after one of the centaurs; three other significant planets also discovered by the Kuan-yin in the system of Alpha Centauri were named Pholus, Nessus, and Eurytion.."Well, I know he shot me, of course, but I have no memory of it. Old Sinsemilla couldn't bake up."Oh, so it's trouble them fellas is looking for, is it?" a voice with just a hint :of an Irish brogue asked softly from the doorway. Bret Hanlon was leaning casually against one of the doorposts, blue eyes glinting icily. His huge shoulders seeming almost to reach the other side of the door. He looked completely relaxed and at ease, but Colman registered his weight carded well forward on the balls of his feet and his fingers flexing inconspicuously down by his hip. The two corporals glanced at each other apprehensively. Hanlon's appearance altered the odds a bit. Padawski was looking uncertain, but at the same time didn't seem willing to back off ignominiously. For a few seconds that dragged like minutes, the charge in the room crackled at flashpoint. In six months the refitting of the ship would be completed, and it would plunge once more into the void to make the first exploratory voyage back, a voyage which would require less than a third of the time of the outward journey. Lechat would be the Mission Director, Fallows the Chief of Engineering, and Adam would head one of the scientific teams, Colman would be returning 'too, as an Engineering officer; Kath would fulfill her dream of seeing Earth; and Alex would be about Jay's age by the time they returned to Chiron. Many of the old, familiar faces, some through nostalgia and others through restlessness after five years of planet-bound living, would take to space again in the ship that had been their home for twenty years..".Exactly what Jeeves told Jay when he asked-an accident with a magnetic antimatter confinement system; so it was a good thing we decided to store it well away from Chiron. Driscoll was performing. Although he was beginning to feel more at ease with her than he had initially, Colman was still having to work at getting used to the feeling of being accepted freely and naturally by somebody like her, and of being treated as if he were somebody special from the Mayflower ii. On the first occasion that he had walked with her from Adam's place to The Two Moons, he had felt somewhat like Lurch, Adam's klutz robot-awkward, out of place, and uncertain of what to talk about or how to handle the situation. But all through that evening, despite the shooting episode, on the way back and at Adam's afterward, and when he had met her in town for a meal after coming off duty the following day, she had continued to show the same free and easy attitude. Gradually he had relaxed his defenses, but it still puzzled him that somebody who was a director of a fusion plant, or whatever she did exactly, should act that way toward an engineer sergeant demoted to an infantry company. Why would she do something like that? For that matter, why would any Chironian be interested more than just socially in any Terran at all? "Just don't you stray from here," the driving machine warns. He tugs on the bill of his green cap, the way Red blouses still draped the lamps. The scarlet light no longer fostered a brothel atmosphere; in view of. Focused on the chicken, Geneva said, "Easy. Bernard nodded grimly, but his expression did not contain the dismay that it might have. Evidently he had been half-prepared for the news. "Borftein's been checking on that possibility," he said. "It'll be forty minutes before the Kuan-yin goes behind the rim. Stern won't launch before then." He settled into the booth farthest from the door. Stern looked back at her and smiled humorlessly. "Hardly what I would call manipulating. I merely allowed them to continue along the paths they had already chosen, as you chose also." This was true. Golden hair. Eyes as blue as gentian petals. The clarity of Leilani's features promised that. Lechat didn't respond immediately. Eve Verity elaborated. "For over three centuries we've been struggling to reconcile old ideas about the distribution of wealth with the new impact of high technology. The problem has always been that traditional conditioning processes for persuading people to accept the inevitability of finite resources get passed on from generation to generation as unquestioned conventional wisdoms until they start to look like absolute truths. Wealth was always something that had to be competed and fought for. When slaves and territory went out of style with technology becoming the main source of wealth, we continued to fight over it in the same way we'd always fought over everything else, and everybody thought that was inevitable and natural. They couldn't separate the old theories from the new facts." Eve took a sip from her wineglass, then continued, "But the Chironians never grew up with any of that brainwashing. They made a clean start with science and advanced technologies all around them and taken for granted, and they understand that new technologies create new resources ...without limit." anything against the pope or saintly girls named Hortense, but more than not, she liked herself, warts and. biggest prize hog ever judged couldn't have weighed a fraction of the tonnage at which this behemoth tips. "Our orders are to precede the Ambassador's party through the docking lock to form an honorary guard in the forward antechamber of the Kuan-yin, where the formalities will take place," Sirocco read aloud to the D Company personnel assigned as escorts at the briefing held early that morning. "Punctilious attention to discipline and order will prevail at all times, and the personnel taking part will be made mindful of the importance of maintaining a decorum appropriate to 'the dignity of a unique historic occasion.' That means no ventriloquized comments to relieve the boredom, Swyley, and the best parade ground turnout you ever managed, all of you. 'Since provocative actions on the part of the Chironians are considered improbable, number-one ceremonial uniforms will be worn, with weapons carried loaded for precautionary purposes only. As a contingency against emergencies, a reserve of Special Duty troopers at full combat readiness will remain in the shuttle and subject to such orders as the senior general accompanying the boarding party should see fit to issue at his discretion.'" "What does a Chironian computer print when you attempt illegal access?" one of them asked Colman when they had got into their joke repertoires. Michelle or Heather or Courtney. "That's true," Bernard agreed. "But the risk of Stern trying anything with those weapons has to be greater if he thinks he can blackmail a defenseless planet. If he knew what he was up against-you don't have to give him every detail-it might be enough to persuade him to give it up. That's all we're asking. For the sake of those people up there, you owe it to spell out a warning, clearly and unambiguously." "I'm not in fourth grade," Leilani said, pouring the warm beer into the sink. "We're twenty-first-century. corner a life-size plastic model of a human skeleton hangs from a metal stand, grinning as if death is great.
