"Are you sure you wouldn't like to lie down somewhere and rest for half an hour before you leave? It might do you a lot of good." Celia shook her head. Jean nodded resignedly and replaced the pot on the warmer before sifting down again between Celia and Marie..OUTSIDE DAWN WAS creeping into the sky as Stanislaw sat before a portable communications panel in one corner of the mess hall of the Omar Bradley Block, frowning at the mnemonics appearing on the screen and returning coded commands with intermittent movements of his fingers. Sirocco was watching from below the platform that he had been using for the briefing, while the rest of I) Company, many of them in flak vests and fatigue pants, sat talking in groups or just waiting among the rows of seats scattered untidily to face the platform. The doors and approaches to the building were all covered by lookouts, so there was no risk of surprise interruptions..refrigerators, sinks, and preparation tables, all stainless steel, gleaming and lustrous, provide him with a television news, the residents proved more cautious than curious. No one ventured outside to discover. Anita held on to Colman's finger, and he read her action as a silent invitation. He had slept with her a few times, many months ago now, and enjoyed it. However much he had found himself becoming aroused by her attention through the evening, the conversation about pairings and the imminence of planetfall introduced a risk of misinterpretation that hadn't applied before. Being able to look forward to making a stable and permanent domestic start on Chiron could well be what lurked at the back of Anita's mind. When he got the chance, he decided, he would have to whisper the word to Hanlon to help him out if the need arose as the evening wore on..cheeseburgers for Old Yeller." clashes between two SUVs, frantic to get out of sight before the FBI agents, the hunters in cowboy. Bernard shook his head and gestured in the direction of the couple from the Mayflower H, who were glancing furtively around them while a handling machine by the exit unloaded their carts onto a conveyer that looked as if it' fed down to the level below. "But look what's happening," he said. "How long can you keep up with that kind of thing? "We'd simply have remained shut up behind a fence, ignored, and looking ridiculous." Borftein thought about the remark for a few seconds. "Do you think that could be what Stern's hoping for?" His tone betrayed that the thought hadn't registered fully until then..appropriate of all her mother's fragrances..Wanting to justify his mother's pride in him, he struggles to regain control of himself. Later, if he lives., That morning Paul Lechat, whom she had never thought of as especially noteworthy on any issue, had announced himself as a late candidate in the elections and called for the establishment of a separate Terran colony in Iberia, somewhere up in Selene. He wanted to allow the people from Earth to pursue their own pattern of living without disruptive influences for the immediate future, and possibly to make such an institution permanent if it suited enough people to do so. To Jean the announcement had come as a godsend, and to many others as well, if the amount of popular support that had materialized from all sides within a matter of hours was anything to go by. Why couldn't everybody see it that way? she wondered. It was so obvious. Why were there always some who were obstinate and valued political interests before what common sense said would be for the common good, such as Kalens, who even now was reacting to Lechat as a threat and rallying his own followers to action?. hesitancy and trots at the boy's side..without permission in writing from the publisher. The note read: that he would have encountered from the finny residents of a real aquarium.. Below, the three flashlights swivel in unison and point due north. Toward Curtis.. Kath had moved away to talk to Adam, Casey, and Veronica, who were sitting together beyond the table at which Driscoll was performing. Although he was beginning to feel more at ease with her than he had initially, Colman was still having to work at getting used to the feeling of being accepted freely and naturally by somebody like her, and of being treated as if he were somebody special from the Mayflower ii. On the first occasion that he had walked with her from Adam's place to

The Two Moons, he had felt somewhat like Lurch, Adam's klutz robot-awkward, out of place, and uncertain of what to talk about or how to handle the situation. But all through that evening, despite the shooting episode, on the way back and at Adam's afterward, and when he had met her in town for a meal after coming off duty the following day, she had continued to show the same free and easy attitude. Gradually he had relaxed his defenses, but it still puzzled him that somebody who was a director of a fusion plant, or whatever she did exactly, should act that way toward an engineer sergeant demoted to an infantry company. Why would she do something like that? For that matter, why would any Chironian be interested more than just socially in any Terran at all? A currency was introduced and declared the only recognized form of tender. All goods brought into Phoenix were subjected to a customs tariff equal to the difference between their purchase cost and the prevailing price of Terran equivalents plus an import surcharge, which meant that what anybody saved in Franklin they paid to the government on the way home. Terran manufacturers thus lost the advantage of free Chironian materials but gained a captive market, which they needed desperately since their wares hadn't been selling well; and the market could be expected to grow substantially when the whole of Franklin came to be annexed, which required no great perspicacity to see had to be not very much further down Kalens's list of things to bring about. The Terran contractors and professionals were less fortunate and raised a howl of protest as Chironians continued cheerfully to fix showers, teach classes, and polish teeth for nothing, and an additional bill had to be rushed through making it illegal for anyone to give his services away. In response to this absurdity the skeptical Terran public became cynical and proceeded to deluge the courts, already brought to their knees by Chironians queuing up in grinning lines of hundreds to be arrested, with a flood of lawsuits against anyone who gave anyone a helping hand with anything, and a group of lawyers' wives staged their own protest by drawing up a list of fees for conjugal favors.. "Were I what?" "Sure." Sirocco tossed up a gauntleted hand as if the answer were obvious. "Guys who don't like it but have to do it get mad. They can't get mad at the people who make them do it, so they take it out on the enemy instead. That's what makes them good. Bernard Fallows was calling from the Communications Center. "I guess you did it," he said. "But it's not over yet. We've found out where Sterm is." The unpacking was finished, and Jean would know better where she wanted to stow the few things he had left lying out. The move had gone very quickly and smoothly, mainly because the Chironians had even furnished the place--fight down to the towels and the bed linen, which had meant that the Fallowses could leave most of their own things in storage at the base until something more permanent was worked out..knew to be a cold command: "Come, glowering girl, come, come! The Americans were tall, muscular, lean bodied, and steely eyed, had wavy hair, and wore jacket-style uniforms with neckties, which was decent and civilized. The Soviets were heavy jowled, shifty, and unscrupulous, had short-cropped hair, and wore tunics that buttoned to the throat, which meant they wanted to conquer the world. The Americans possessed superi6r technology because they had closer shaves.."You're not a mutant." Adam threw up his hands again. "The kids won't let me! What can you do?".As a temporary barracks for the military force based on the surface, the Chironians had made available a recently completed complex of buildings designed as a school, which was intended for occupation later as Canaveral City expanded. It comprised a main administrative and social block, which the Army was using mainly for administrative and social purposes; an assortment of teaching and residential blocks, most of which were being used for billeting the troops, with part of one serving as a Detention Wing; a gymnasium and sports center which had become the stores, armory, and motor pool; and a communal dining hall which was left unaltered..Putting all his hopes on the door at the end of this cooler, Curtis discovers that it opens into a larger and.Sirocco wrinkled his lip, showing a glimpse of his moustache. "You can't fool me, Steve. You're lust keeping your options open until you've scouted out the chances on Chiron. Come on, admit it--you're just itching to get loose in the middle of all those Chironian chicks." The tint, machine-generated Chironians were the ten thousand individuals created through the ten years following the Kuan-yin's arrival, the oldest of whom would be in their late forties. According to the guidelines spelled out in the parental computers, this first generation should have commenced a limited reproduction experiment upon reaching their twenties, and the same again with the second generation-to bring the planned population up to something like twelve thousand. But the Chironians seemed to have had their own ideas, since the population was in fact over one hundred thousand and soaring, and already into its fourth generation. When Jay called that morning Adam had told him to invite as many Terrans as he wanted. Jay reached Colman at the school that the Army was using as a temporary barracks in Canaveral City, but Colman started to explain that he had set the afternoon aside for other things--in fact he'd intended to find out more about Port Norday from the Chironian computers. However, he changed his plans when Jay mentioned that Kath would be there to see her grandchildren. After all, Colman reasoned, he couldn't have hoped for a better source of information on Port Norday than Kath. As Hanlon was off duty, Colman had invited him along too.. "True," Hermann, the young man in the white labcoat, agreed. "But on top of that, parts of this place are used as a school to give the kids early off-planet experience. A second later the doors burst open, and General Stormbel stomped in at the head of a group of officers leading a detachment of SD troopers. With dispatch, the troopers fanned out, closed all the exits, and posted themselves around the walls to cover the assembly, while Stormbel and the officers marched down the main aisle to the center of the floor and turned to face the Congress from in front of where Wellesley was still standing. Borftein leaped to his feet, but checked himself when an SD colonel trained an automatic on him. He sank into his seat, a dazed expression on his face.. contention.. mind to him, Curtis. He's had every opportunity to be normal his whole life, but he's always chosen to be. Although Colman was going along with the mood and making a joke out of it, inside he felt a twinge of irritation. He wasn't sure why. Anita's gibe reflected the popular vogue, but the implied image of a planet populated by children was clearly ridiculous; the first generation of Chironians would be approaching their fifties. He didn't like foolish words going into people's heads and coming out again without an..? thought about their meaning having transpired in between. Anita was an attractive girl, and not stupid. She didn't have to do things like that. Then it occurred to him that perhaps he was being too solemn. Hadn't he just done the same thing?. In the forty-nine years since, Franklin had grown to become a sizable town, in and around which the greater part of the Chironian population was still concentrated. Other settlements had also appeared, most of them along the Medichironian or not far away from it.. protect him.. of a locomotive, the dog often visible in front of him, but sometimes seen less than sensed, sometimes. Four concrete steps lead down to. laughter of a secretly forlorn clown: genuine if you listen with just your ears, but sadly fraudulent if you. In the corridor, the quartet had shifted to Mozart. "Have the robots been kept on as a kind of tradition?" Bernard asked.. "I could go and see if I can find him," Jay offered. "I don't think I'd attract much attention. Even if the SDs are out, they're not going to be looking for me." Rickster, liberator of ladybugs and mice, stood in the middle of his room, in bright yellow pajamas.. "Okay. Get back here when you're through." Geneva beamed. "That's so sweet, Leilani. Would you like some fresh lemonade?" and bristling blind-dark forest.. "We'll manage," Veronica promised. "They're more awkward than heavy. You worry too much." "Love yourself, love your brothers and sisters, love nature." The capsule arrived, and Jay fell silent while he digested what Pernak had said. As they climbed inside, Jay entered a code into the~ panel by the door to specify their destination in the Jersey module, and they sat down on an empty pair of facing seats as the capsule began to move. After a short run up to speed, it entered a tube to exit from Maryland and passed through one of the spherical intermodule housings that supported the Ring and contained the bearings and pivoting mechanisms for adjusting the module orientations to the ship's state of motion. For a brief period they were looking out through a transparent outer shell at the immensity of the Spindle, seemingly supported by a web of structural booms and tie-bars three miles above their heads, with the vastness of space extending away on either side, and then they entered the Kansas module where the scene outside changed to animal grazing enclosures, level upon level of agricultural traits, fish farms, and hydroponics tanks.. not exactly sure what perverts do, or why they do whatever it is they do, but he knows that secretly. his friend.. she'd promised herself. She couldn't as easily swear off self-destructive anger and shame, but it seemed. "They're okay," Corporal Swyley's disembodied voice ? whispered from no definable direction. "The inverted logic that had puzzled him had not been something peculiar to the military mind; it was just that the military mind was the only one he had ever really known. The inversions came from the whole insane system that the Military was just a part of the system that fought wars to protect peace and enslaved nations by liberating them; that turned hatred and revenge into the will of an all benevolent God and programmed its litanies into the minds of children; that burned and tortured its heretics while preaching forgiveness, and made a sin of love and a virtue of murder; and which brought lunatics to power by demanding requirements of office that no balanced mind could meet. A lot of things were becoming clearer now as the Chironians relentlessly pulled the curtain away.. "Sure." Clem gestured vaguely behind him. "There's a big room back along the corridor that's free and should hold everybody. We could all get some coffee there too. I guess you could use some--you've had a long trip, huh?" "Ex-sergeant Malloy of the SDs," Swyley said. "He decided he'd had enough and quit over a month ago. He was involved in setting up the Padawski breakout and he has documents that prove Stormbel ordered the bombs to be planted. He wants to go public." Swyley shrugged. "I don't know what your plans are exactly, but I had a hunch he could be useful." "She could do a lot better than waste herself with those bums. She's the kind that prefers the easy road. . . for as long as it lasts, anyhow." "Oh, I see." "They must be, mustn't they," Mrs. Crawford agreed blissfully. She shook her head. "In some ways it seems almost criminal to take them, but..." she sighed, "I'm sure they'd just be wasted otherwise. After all, those people are obviously savages and! quite incapable of appreciating the true value of anything." Celia's throat tightened, but she managed to remain quiet. Mrs. Crayford fussed with her pile of boxes. "Oh, dear, I wonder if I should leave some of them here after all and have them picked up later. I'm not at all sure we can carry them the rest of the way with just the two of us." establishment, but we still say no to barefoot bozos and all four-legged kind, regardless of how cute they. "My pleasure." Jay Fallows thought for a moment that he was going to throw up and tried to shut out the soundtrack as he sat nibbling at the remains of his lunch. An astronomy book lay propped open on the table in front of him. Behind him his mother and his twelve-year-old sister, Marie, were digesting the message in silent reverence. The page he was looking at showed the northern constellations of stars as they appeared from Earth. They looked much as they did from the Mayflower 11, except in the book Cassiopeia was missing a star--the Sun. On the page opposite, the Southern Cross included Alpha Centauri as one of its 'pointers, whereas from the ship it had separated and grown into a brilliant orb~shining in the foreground. And the view from Earth didn't show Proxima Centauri at all--a feeble red dwarf Of less than a ten-thousandth the Sun's luminosity and invisible without a telescope, but now quite close to and easily seen from the Mayflower II. Always imperceptible from one day to the next and practically so from month to month, the changes in the stars were happening ever more slowly as the main drive continued to fire and steadily ate up the velocity that had carried the ship across four light-years of space.. She wriggled closer and slid an arm across his chest. "Tell me about Earth. I've told you how I grew up. What was it like with you?" "You bitch" Celia protested. "I want to hear about it now." Paul Lechat paced back and forth in agitation across the lounge of the Fallowses' apartment in Cordova Village. "I didn't think the Chironians would go that far." he said. "I thought they would react only against direct violence. Why couldn't they have just let everything die a natural death?" hours at the Haven of the Lonesome and the Long Forgotten were drawing toward a close, and a much sun." "Somebody has to run the Army. It's just his turn. He's as qualified to do it as anyone else." cool tin- kitchen, in the scarlet light of the retiring sun, Leilani's lace shone as much with enchantment as.
