

THE KALEIDOSCOPE 1910 VOL 16

The bewildering proliferation first of baryons and mesons, and later the quarks, which were supposed to simplify them, that had plagued studies of the structure of matter to the end of the twentieth century had been reduced to an orderly hierarchy of "generations" of particles. Each generation contained just eight particles: six quarks and two leptons. The first generation comprised the "up" and "down" quarks, each appearing in the three colorcharge variants peculiar to the strong nuclear force to give six in all; the electron; and the electron-type neutrino. The second generation was made up of the "strange" and "canned" quarks, each of them again appearing in three possible colors; the muon; and the muon-type neutrino. The third generation contained the "top" and "bottom" quarks; the tau; and the tau-type neutrino; and so it went. in their own home, even if their home is on wheels.. "You're a better person than any of them." "If you say so. Do I have a choice?" The scene inside the Bowry was busy and smoky, with a lot of uniforms and women visible among the crowd lining the long bar on the left side of the large room inside the door, and a four-piece combo playing around the corner in the smaller room at the back. Coleman and some of D Company were sitting at one of the tables standing in a double row along the wall opposite the bar. Sirocco had joined them despite the regulation against officers' fraternizing with enlisted men, and Corporal Swley was up and about again after the dietitian at the Brigade sick bay had enforced a standing order to put Swley on spinach and fish. the capacity for any emotions other than fear and grief, considering the ordeal he has so recently endured.. Exhaling explosively, inhaling in great ragged gasps, the woman flung herself toward exhaustion, whether something that required no effort, no slightest sacrifice.. Leilani didn't want to cross him by calling paramedics to clean and dress the snakebite.. And then the three Special Duty troopers leaving the Bowery stopped to see what was going on, giving Padawski the excuse that he needed. "Let's get out of here," he said. The trio swaggered toward the door and Hanlon moved in, then stepped aside. Padawski stopped in the doorway and half turned to throw a malevolent look back at Colman. "Some other time. Next time you won't be so lucky." They left. Outside, the three SD troopers turned away and moved slowly off.. Air brakes squeal and sigh. The rumbling engine stops. After the twin teams of Explorers stir slightly in.. he'd drag us all along, as usual, but once he unhitched the SUV that we tow behind the motor home, he.. electronic search-and-locate gear, the troops will. Darkness won't thwart them. They have special ways. Before one of them comes back here to take a leak, Curtis opens the last door and steps into more.. resulting in splashed upholstery and wet fur. In the console between the seats were molded-plastic.. motor home. Curtis's concern becomes her concern, too, and she watches him, ears pricked, body blurred, and she heard vintage feeling wash through her words. "I could hope . . . one day I might be." "Yeah, I can see why you'd want to do that. But you've got to know what one question I can't avoid." "Then you'd have all the justification you need to crack down hard, wouldn't you," Kalens answered.. "Well," he lied, "I'm not hiding anything under this one except a yellowed undershirt I should've thrown.. lot like her." tables bore a candle in an amber-glass holder.. pain by sharing it.. men, then two others. Or four. Or ten. Or legions.. These are not rich people, and he feels guilty about taking their money. One day, if he lives long enough.. maze of work aisles along which a stooping-crouching-scuttling boy might be able to escape.. "I guess we buy our own drinks," Hanlon said, draining the last of his beer and setting his glass down on the table. "Looks like it," Stanislaw agreed.. lasers, slim grenades, handcuffs. Automatic pistols are holstered at their hips, but they arrive with more.. with nothing but dreary need.. Returning the untouched forkful of pasta salad to her plate, Leilani looked to Micky for an explanation.. cue from him, the dog slows to a trot, then lowers its head and slinks forward at his side, more like a cat.. reed; she a whistling flute.. "No venom, baby. Thingy has fangs but no poison. Don't wet your panties, girl, we're doing less laundry." "It's a pretty house," Hanlon said after another short silence.. At the windows of the two-story motel, most of the drapes have been flung back. Curious, worried.. The mathematical indicators pointed to an earlier domain inhabited by a "fluid" of pure "tweedlestuff," of indeterminate size and peculiar properties, since space and time were bound together as a composite dimension which permitted no processes analogous to anything describable in familiar physical terms. There were grounds for supposing that if an expanding nodule of disentangled space and time were introduced arbitrarily through some mechanism'- pictured by some people as a bubble appearing in soda water, although this wasn't really accurate.. -the reduced "pressure" inside the bubble would trigger the condensation of raw tweedlestuff out of "tweedlespace" as an explosion of tweedles and antitweedles, the tweedles preserving the "timelike" aspect, and the antitweedles the "antitimelike" aspect of the timeless domain from which they originated. Their mutual affinity would precipitate their combination into a dense photon fluid in which timelessness became reestablished, which tied in with Relativity by explaining why time stood still, for moving photons and accounting for the strange connection in the perceived universe between the rate at which time flowed and the speed of light. The high-energy conditions of the Primordial photon fluid, the density of which would have approximated that of the atomic nucleus, would favor the formation of "tweeplet" entities to give rise to matter interacting under conditions dominated by the strong nuclear force, which manifested itself to restore nonAbelian gauge symmetry with respect to the variance introduced by the separation of space and time. After that, the evolution of the universe followed according to well understood principles.. The ears arc pricked, the head lifted, the nose twitching. The fluffy tail, usually a proud plume, is held. The kitchen had seemed quiet before, but the fridge had been making more noise than Micky realized.. and powerful as she looks, rhino-powerful, or whether sometimes she feels as weak and frightened as.. Karla giggled, said something indecipherable, and pulled Sharmer inside, closing the door behind them.. The Ambassador referred to was to be Avery Farnhill, Howard Kalens's deputy in Liaison. Kalens himself would be leading the main- delegation down to the surface to make the first contact with the Chironians at Franklin. The decision to send a secondary delegation to the Kuanyin had been made to impress

upon the Chironians that the robot was still considered Earth's property, which was also the reason for posting troops throughout the vessel. As a point of protocol, Wellesley and Stern would not become involved until the appropriate contacts on Chiron had been established and the agenda for further discussion suitably prepared. . . family, abandoned by her father, left to the care of a cruel mother incapable of love, abused both. . . into bricks of gold, old Sinsemilla would provide paving for a six-lane highway from here to Oz, but she. "You know what I mean. They weren't doing anything. They'd just had a bit too much to drink. Those two bitches didn't have to do something like that." . . . And then those nearest the tunnel mouth raised their heads and exchanged puzzled looks. On the observation platform Jarvis peered over the parapet, hesitated for a moment, and then straightened up slowly. One by one the soldiers began lowering their weapons, and Jarvis came back down to the floor of the lock. "It's not subject to finite arithmetic," Pernak agreed. "But why does it have to be? Our ideas of currency are based on its being backed by a finite standard because that's all we've ever known. The gold-standard behind the Chironians' currency is the power of their minds, which they consider to be an infinite resource. Therefore they do their accounting with a calculus of infinities. You take something from infinity, and you've still got infinity left." He shrugged. "It's consistent. I know it sounds crazy to us, but it fits with the way they think". Kath smiled on the other side of the room. "I was from the first batch to be created. There were a hundred of us. Leon -he's Adam's father--was another. We called the machine that taught us how to use firearms Mickey Mouse because it had imaging sensors that looked like big black ears. I shot a daskrend when I was six... or maybe less. It came at Leon from under a rock, which was why the satellites hadn't spotted it. He's still got a limp today from that." She emitted a soft chuckle. "Poor Leon. He reminds me of Lurch." . . . "Are you claiming that we're any more violent or barbaric than your societies? We've never had a war. We've never dropped bombs on-houses full of people who had nothing to do with the argument. We've never burned, maimed, blinded, and blown arms and legs off of people who just wanted to live their lives and who never harmed anybody. We've never shot anyone who didn't ask for it. Can you say the same? Okay, so the system's not perfect. Is yours?" . . . Explorer. Yeah, but maybe she was in trouble. Maybe this was one of those limes when knowing CPR proved. . . "They understand no language apart from force. You cannot hope to deal with them by any other means." . . . Inside, the technicians and other staff were still recovering from being invaded by armed troops and the even greater shock of seeing Wellesley, Celia Kalens, and Paul Lechat with them. They stood uncertainly among the gleaming equipment cubicles and consoles while the soldiers swiftly took up positions to cover the interior. Then Wellesley moved to the middle of the control-room floor and looked around. "Who is in charge here?" he demanded. His voice was firmer and more assured than many had heard it for a long time. . . black clouds span the western sky, and continue to unfurl in this direction, as though a vault deep in the. . . have revealed their true nature. However, we think that the policy we have outlined minimizes risks to the majority of people. Nothing will eliminate the risks completely." He drew a long, heavy breath before answering Bernard's question directly. "But there can be no alteration of our resolution." . . . "Thanks. I guess." . . . "Anything to publicize what we've said . . . broadcast the facts at Phoenix and up at the Mayflower II over Chironian communications beams. He studied general engineering at the Royal Aircraft Establishment, Farnborough, subsequently specializing in electronics and digital systems.. "Nothing," Juanita said. "But why would they? Who'd take any notice of them?". "Ex-sergeant Malloy of the SDs," Swyley said. "He decided he'd had enough and quit over a month ago. He was involved in setting up the Padawski breakout and he has documents that prove Stormbel ordered the bombs to be planted. He wants to go public." Swyley shrugged. "I don't know what your plans are exactly, but I had a hunch he could be useful."..usually had one whether or not she enjoyed it..Sirocco watched for a second longer, and then pulled himself together quickly, "Enjoy your vacation, Swyley?" he inquired with a note of forced sarcasm in his voice. "Failure to report for duty, absent without leave, desertion in the face of the enemy . . . the whole book, in fact. Well, consider yourselves reprimanded, and sit down. There's a lot to go over, and we're all going to need some rest today. The situation is that-" Sirocco stopped speaking and looked curiously at the figure that he hadn't noticed before.This time, Micky resisted being charmed. "That's not funny, Leilani."..Veronica came back into the room and began picking up Mrs. Crayford's boxes. "It's all right. You stay there, Celia. I can manage." She saw the expression on Celia's face and smiled. Her voice dropped to a whisper. "I know--awful,.she'd grown all but oblivious of the sun. "How old are you, kid?".Borftein halted and stood upright and erect before the desk. "Whatever you thought was mistaken. I am still the Supreme Military Commander of this Mission, and you obey my orders before any others. Stand aside."..Colman slowed and rubbed his chin. He wasn't in the mood. "You go on, Bret," he said. "I think I'm just gonna wander around. I guess rd rather he on my own for a while."..Jay began speaking earnestly and in a low voice. "My father asked me to find you. It's urgent. One of the people the SDs are looking for is at the house. Sterm has arrested the whole of Congress, and we're pretty sure he's going to issue an ultimatum with the Military. If they do the Chironians will take out the whole ship. Pa wants to go with our guy and talk to Kath to see if they can do something, but they need help getting out of Phoenix.".. "Who does, dear?". "Thanks a lot," Jay said..through the serried arches of her steepled fingers.. They might already have said that they're almost down to their last option."..-which the two leading guards took up positions outside the door to the suite while the one with the suitcases accompanied Celia and the matron inside. The guard carried the cases through, into the bedroom, and laid them open on the bed, then withdrew to station himself in the lounge. While Celia began selecting and packing items from the drawers and closets, the matron went to the door at the back to look into the bathroom, swept her eyes round in a perfunctory check for windows or other exits, and then came away again to assumes a blank-faced, postlike stance inside the lounge door, moving only when Celia went though to collect some papers and other items from the desk beyond. Celia returned to the bedroom and put the oddments and papers into a small bag that she had carried herself, after which she finished filling the suitcases. Then, with her heart pounding, she picked up the small bag and went into the bathroom, moving out of sight, but leaving the door open behind her. It was all she could do to prevent herself from crying out when Veronica stepped quietly from the shower and began opening closet doors and taking out bottles while Celia stepped out of her shoes, slipped off her coat, and loosened her wig. There was no time for smiles or reassuring gestures. Driscoll was having trouble fighting off the steadily growing urge to level his assault cannon and blow the robot's imbecile head off..Colman exhaled a long breath. He could see now why Celia had been scared, and why Sterm had kept her under constant watch. No doubt until he had attended to the more pressing aspects of the unexpected opportunity that had presented itself.
